The term contactless is used herein to denote a test structure that does not have a physical contact to the sample and does not require physical contact of a test probe to the sample to perform its detection function. Contactless test structures are commonly used in testing samples of material, such as semiconductor samples. An example of a contactless test structure for semiconductors is disclosed in European patent document EP 0 416 232. FIG. 1 shows a conventional contactless test structure,

KMSpico 10 8 6 FINAL (Office And Win 10 Activator)
