A useful tool that is easy to learn and intuitive to use. A simple and user-friendly interface helps you analyse and change the metadata of certain files. Wide-angle lenses, high quality ISO and auto exposure control are a few of the key tools used by photographers, but the camera's hardware shutter speed can also help contribute to a striking image. By lowering the camera's shutter speed, you increase the exposure time and allow the camera's ISO to take over, allowing the photographer to achieve greater sharpness and contrast. When choosing a camera with a fast shutter speed, the ISO can be increased, or the shutter speed decreased, to compensate for the greater light exposure. But what does a fast shutter speed actually mean? In photography, the shutter speed refers to the number of frames that the camera uses to capture a photo, and to control the exposure time. A shutter speed of 1/200, for example, refers to a shutter speed of 200 frames per second. This equates to 20 seconds of exposure time per frame. If the shutter speed is 1/200, the ISO is automatically set to the low-light setting of a maximum ISO of 1600. A slow shutter speed can make images blurry and grainy, and be the cause of some photo editing problems. Slow shutter speeds also allow for more motion blur and more dramatic effects that can be achieved by photographers, but the effect of a slow shutter speed is also the reason why low-light cameras are not as good at focusing on distant subjects as many photographers would like. Fast shutter speeds also require a low ISO, although not always at the same time. Shutter speeds of around 1/2000 or faster will require a low ISO of around 100, or the camera's noise reduction feature turned off. The advantage of choosing a camera with a fast shutter speed is that you can get sharper images and greater contrast in low light, and in certain types of conditions. This is especially important for images in low light, such as landscapes or night landscapes. Fast shutter speeds can also be used in sports photography to freeze action, which is often the case with photography of hockey or football, or certain events such as concerts. When is a shutter speed a good choice? Fast shutter speeds are good when you're taking photos of fast action or are shooting night landscapes or other low-light photos. Fast shutter speeds are also ideal for shooting photos of fast objects, like in sports
