When the stars went out, chaos reigned. Every year, the world would be shattered by a massive solar flare, and the land would be plunged into darkness. At first, it seemed like nothing much would come of it. The cities in the woods would be haunted by invisible monsters for a while, and the land would suffer far worse than any storm. It would take time for things to return to normal, and during that time, some people, scavenging deep in the underground, found something. Something they had not been expecting. Something that brought them together. Ten years later, the world is a different place. The core of the planet has been split in two, dividing the regions between two separate major powers, the Philosophers and the Storm. The Dark Years: In the furnace of the Darkness, an entire underground city was built. It is populated by thousands of the Storm's broken prisoners, doomed to be "Witnesses" under the guard of the Philosophers. The Searcher: The Searcher is a man of strength and silence. He commands the city and oversees the Witness's work. His only companion is a scythe. He is surrounded by books, music, and memories. Sometimes, he feels he just wants to go into his quarters and be alone. His name is not shared with anyone. You are inside. That is the job, but it is a lot more than that. Inside is a great mystery. You will need to solve it, find out what happened there. You will need to know the truth. The truth of why the city was built. Features: 10 main classes: Searcher "The Glass Maiden: She is the city guard. She can control light, and she can use it on the enemy. She is a weapon. The Philosopher: He is a calm voice of reason among the madness. He is the strongest force inside. The Witness: Their job is to remember, not to reason. They're the ones who close themselves off, to pry into the darkness of their past. The Anarchist: He is the one who cannot be controlled. He is the heavy hand of force in everything. He is best able to apply it. The Judge: He is the philosopher's tool. He is inside and outside. He sees what needs to be seen. His focus is the big picture. The Vampire: He d41b202975

### What's new in RUN: The World In-between:

**Come Aug. 31, 2019, when Erlack Alignment leaves the simulation and enters the real world, its ancestors will get very real. Not in the family unit sense - because the members are bound by a computer-generated legal contract created to minimize the risk of piracy - but rather in the national sense. "When you cross that line, it's no longer Erlack," said Alton Beichner, the CEO and co-founder of the studio that has operated in the 160-acre barren islands of Coronado since 2016. "It's a consumer, just like we are to you." A small office off the beaten path on the back lot of Herriman Studios in Salt Lake City, Erlack Alignment is a studio committed to making video games within several genres. Using Unreal Engine technology, the studio's goal is to create console-quality games for players at lower costs. But for Beichner and his partners, they took great pains to clarify that to leave the simulation is not the same thing as the game being "unplayable." "No one is going to be around to play the game once we release," Beichner explained. "On the Erlack Alignment website we've always stated that once we release, you won't be able to play the game on a disc, much like how you can't play the game on a phone. You'd have to download that replacement game into your homescreen of your phone. We won't be downloading that part of our game, that's the thing. You won't be able to play on a phone either, but it won't be unplayable." This month, the Canadian-based studio is seeking the first real deliverable from its efforts after it exits beta and enters the live simulator. "We started making beta in early 2017 to prove the tech, to get the basics working," explained Beichner. "Do we have NPCs walking around? Sure. Are they running in the hallway in VR? No. Because we were trying to make it look good, we were adding in everything. We were trying to make it look very cinematic and then we had to scale it back when we realized it was too much."
